1.0 Repository

The OpenVector repository is located at github.com/VectorCamHardware/OpenVector. It is public and contains the bill of materials (catalog/), specification and instruction documents (docs/), and 3D-printable parts (stl/) required to build a VectorCam device.

Repository structure, naming conventions, and file organization rules are maintained in the repository's own README.md files (the top-level README.md and stl/README.md), which serve as the authoritative reference and are kept current alongside the files they describe.

Changes to the bill of materials or supporting files are made directly in the repository. Published updates are reflected on the build-guide webpage.

2.0 Spec Guidelines

2.1 Spec Formatting

To improve the sharing of accurate information, all documents are written in a consistent format. Please maintain this standard when making changes. If the standard can be improved update this section.

Spec Requirements:

- Documents are saved as PDFs of the same title in OpenVector/docs/
- Documents must include a title ("VectorCam" + Title), a Document Details section, and a Table of Contents on the first page.
- Document Details includes up-to-date version, date of last update, update author (name and email), and author (name and email).
- Sections and subsections should be labeled with a section number and name.
- Sections are additionally marked using a horizontal rule above the section number and name
- Subsections should not use a horizontal line divider

- Page numbers are labeled at the bottom right corner of every page.

Text:

- Font (all text): Arial
- Document title: 18pt., bold
- Section and subsection headings: 12pt., bold
- Body text: 12pt.
- List and table text: 10pt. or 12pt.
- Line Spacing: 1.5

2.2 Spec Editing and Authoring

Information should be written to be clear and concise. AI-generated content should be examined by human readers before posting
